

Aquaculture IPT Meeting
March 16, 2007

- Revised outline for section 6.1 was reviewed and accepted
- IPT agreed the discussion of harvest of prey species would be moved into the executive summary and fully expanded on in the Cumulative Effects Analysis (CEA) section.
- The potential for aquaculture as a mechanism in rebuilding stocks through stock enhancement programs needs to be incorporated.
- IPT input would be beneficial for determining the appropriate section to incorporate the stock enhancement discussion, or we could incorporate this discussion into the CEA as well.
- All authors of various sections will have their parts written and submitted by April 20, though earlier would be beneficial to assist in writing the CEA, Unavoidable Adverse Effects, Mitigation Measures, Section 4 summaries, and other summary sections.
- The letter to other agencies was mailed on Monday, March 12. We will begin incorporating the other agency concerns and requirements as soon as they are fleshed out.
