

John Mareska has served with Marine Resources since 2000. As a fisheries biologist his primary responsibilities are fishery independent surveys and assessment of fish stocks. He designed and established Alabama's adult finfish sampling program. John received a B.A. (Psychology) and B.S. (Biology) degrees from Augusta College and his M.S. degree (Fisheries management and ecology) from Mississippi State University.

Current interest includes estimating the age structure and natural mortality of fish stocks. He has served on the special reef fish SSC and SEAMAP subcommittee since 2007. He has served on the task force for several of the Gulf States Marine Fisheries Commissions fisheries profiles and their otolith handbook.
